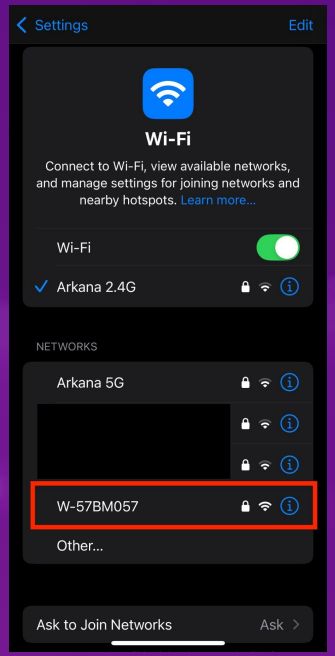
1KOMMA5° Local Access WiFi Connection

1KOMMA5°
AUSTRALIA

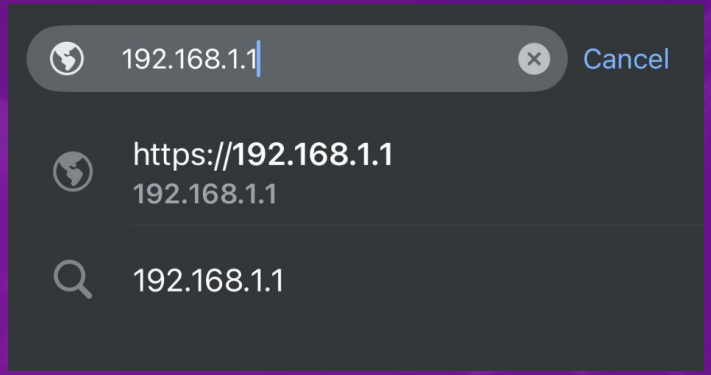
Step 1

First, connect your phone to the inverter through the WiFi menu on your phone. The WiFi password is mtmt2020.



Step 2

In your internet browser, go to 192.168.1.1. It may warn you that it is an insecure site, this is due to their being no internet access through your inverter. If you press ‘Advanced’, it will give you the option to proceed to the website.



Step 3

Login to the local access of your inverter. The login details for your first time accessing this are:
Username: admin
Password: mtmt2020

Once you login, it will prompt you to change the password. Please make note of this, as it will be the only way to access the local access.

Once you have changed the password, it will take you back out and you will have to login again with your new password.

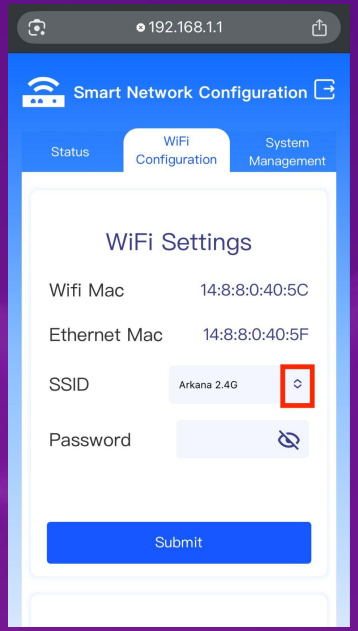
Please note: This will also change the password for the WiFi connection to the inverter.

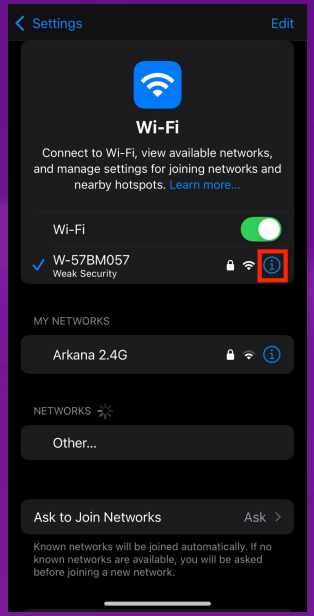
Step 4

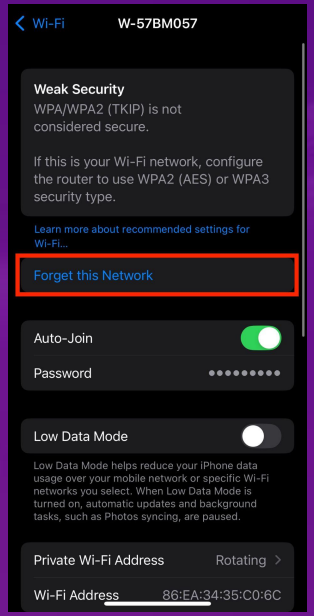
Once logged in, select ‘WiFi Configuration’ at the top of the screen.

Step 5

Use the arrow button to select your desired WiFi connection, then enter the password and select ‘Submit’.



Step 6




Once this is completed, go back to the WiFi settings on your phone, and select the inverter's WiFi connection, then forget the network.
