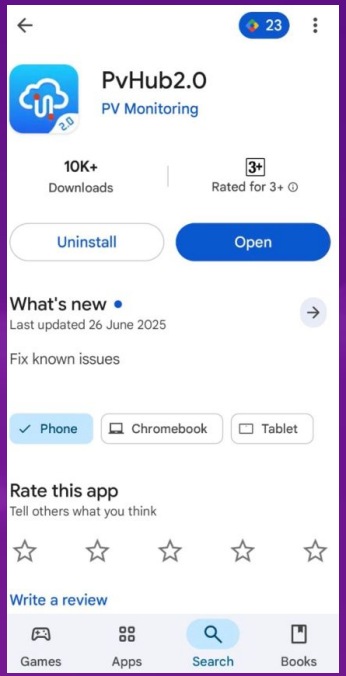
1KOMMA5° WiFi Setup Guide

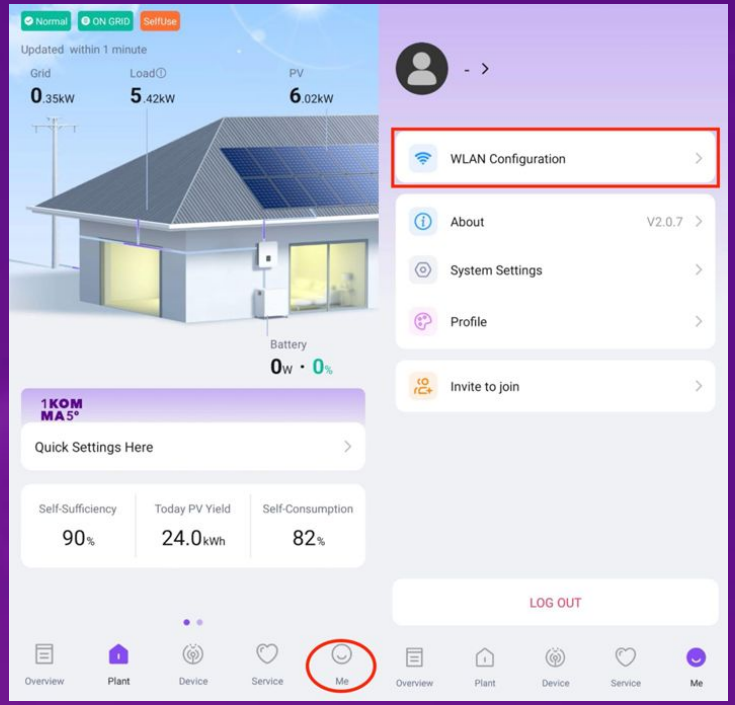
Step 1

If you have not done so already download the PVHub2.0 app from your phones app store.



Step 2

Access WLAN Configuration: Tap on “Me” in the bottom right corner and select "WLAN Configuration" from the menu.

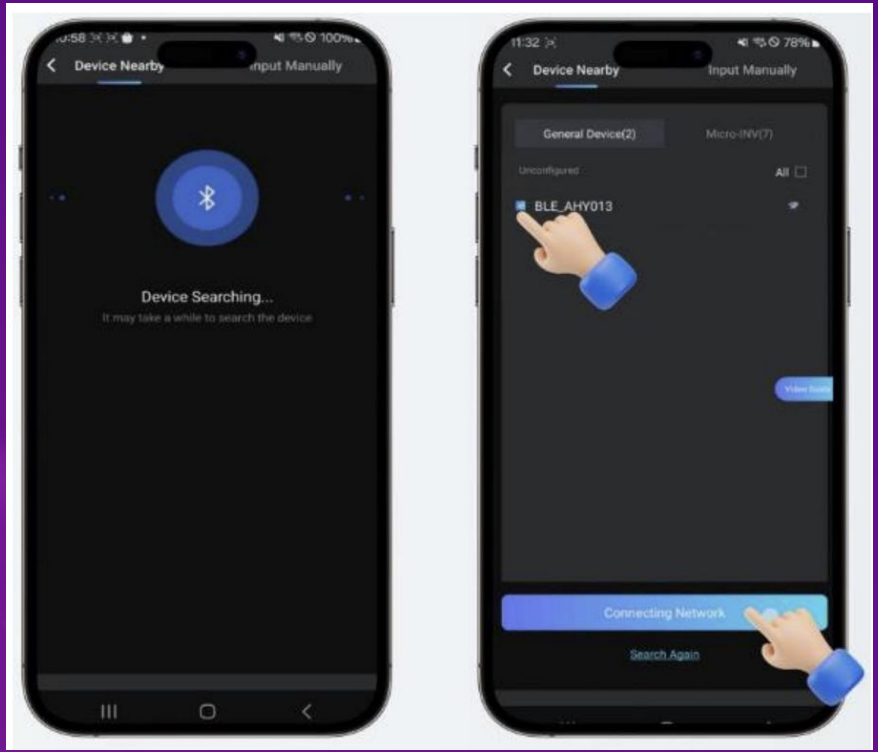


Step 3

If Bluetooth is not already on, the app will prompt you to turn it on.

Search for the Device: The app will automatically search for nearby devices. Once the search is complete, the serial number of your inverters WiFi logger will appear.

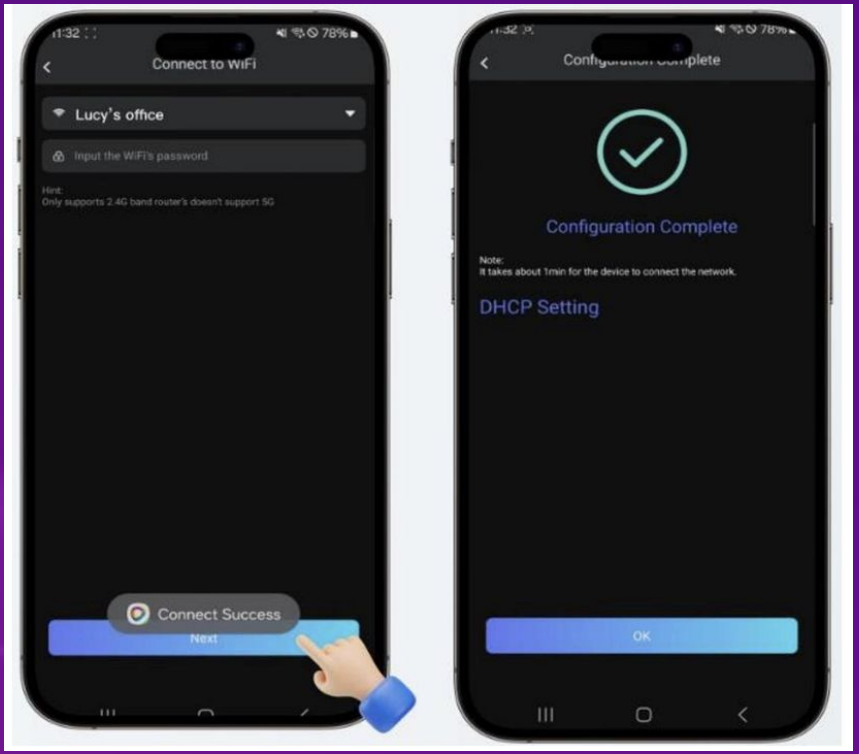
Select your Inverter from the list available (if you have more than one inverter please match the number you are selecting against the WiFi dongle or inverter serial number you are trying to connect).



Step 4

Once you have tapped on the serial number of your data logger click on "Connecting Network".

The app will proceed to the next step, with a header saying "Connect to WiFi".

Select your home WiFi network and enter your WiFi password. Tap "Next" to start the configuration process.


The app will indicate that the configuration is successful.
